REVERSE AIR

ANGIN DAPAT BERPUTAR KE BAWAH DAN KE ATAS

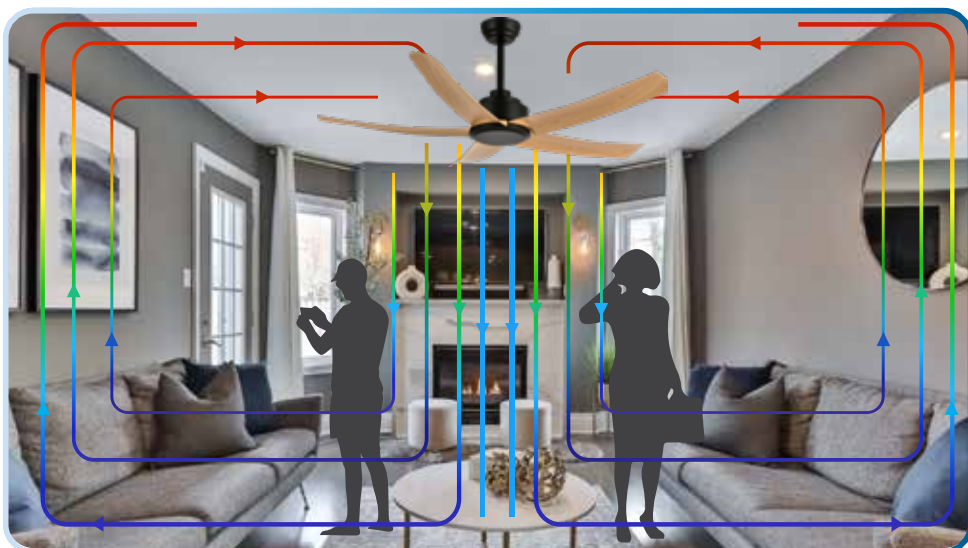

KEUNGGULAN

Pemanasan dan Penyejukan: Saat musim dingin, menggunakan reverse air dapat membantu mengedarkan udara hangat yang terperangkap di langit-langit ke daerah di bawahnya. Sebaliknya, pada musim panas, arah putaran baling-baling yang berlawanan dapat menciptakan aliran udara yang memberikan efek penyejukan.

EFISIENSI

Pemanasan dan Pendinginan: Dengan menggunakan reverse air saat diperlukan, Anda dapat meningkatkan efisiensi pemanasan dan pendinginan ruangan. Misalnya, pada musim dingin, udara hangat yang naik ke langit-langit dapat dipaksa turun ke area tempat orang berada.
